Peer reviewer: Punnapob Wirojwongchai — 67070503425 — SaintCrois

Pull Requests I authored (reviewed by my partner)

PR	Branch	Reviewer verdict
#6	feature/1-project-foundation	Aprove
#8	feature/2-health-check	Aprove
#10	feature/3-category-seed	Aprove
#13	feature/4-category-list	Aprove

feature/1-project-foundation

Yep, you have added the READ ME and bootstrap notice. All clear. GJ.

- Punnapob W.

How I responded: Merge `feature/1-project-foundation` to `lab1-staging` .

feature/2-health-check

Reviewer comment I received:

Good no problem. Clear to merge. Don't forget to make branch for feat 3 before merging naja

- Punnapob W.

How I responded: Thumb up emoji and proceed to merge `feature/2-health-check` to `lab1-staging` .

feature/3-category-seed

Reviewer comment I received:

Good job! You've even updated the README file. Prisma is good. Overall it is a go. Please merge.

- Punnapob W.

How I responded: Add an md file fro the database and the `docker-compose.yml` then merge into `lab1-staging` .

feature/4-category-list

Reviewer comment I received:

Nice, great work. Everything looks good and ready to merge:

- Backend Route: The GET `/api/categories` endpoint in `server/src/app.ts` correctly selects id and name, sorts by id: "asc", and properly handles error status codes (500).
 - Testing: The Supertest suite in `categories.test.ts` cleanly verifies both the HTTP 200 response and the exact order of the 4 seeded categories.
 - Documentation: `docs/lab-01/ai_use.md` and `docs/lab-01/tests.md` are updated
- Ok plz merge.

Punnapob W.

How I responded: Thankyou for the review. Then, merge with ``lab1-staging`

Pull Requests I reviewed for my partner

feature/1-project-foundation

My comment: "Very nice. Include setup guide in [readme.md](#). Question: is the change in `App.tsx` needed?"

Partner's response: Bootstrap is installed and visible in the frontend. So yes.

feature/2-health-check

My comment: "Wait you are merging with main. Do you have the `lab1-staging` or something?"

Partner's response: Oh thank you. Changed that.

feature/3-category-seed

My comment: "The seed is safe to run more than once without duplicates. Wait, how do I do that."

Partner's response: I used `prisma.category.upsert()` in `prisma/seed.ts`. If a category name already exists in the database, it performs an empty update: `{}` instead of creating a duplicate, making the seed script completely safe to run multiple times.

feature/4-category-list

My comment: All the code are being implemented, also include all the necessary document

Partner's response: Heart Emoji, then proceed to merge.
